

Octane Booster

Product Sheet

Octane Booster is an additive specifically formulated to increase the octane rating of gasoline and to maximize the engine performance.

Octane Booster is lead- and aniline-free and performs in gasoline both etilized and not. Thanks to its original chemistry, **Octane Booster** has no high toxic properties, which are instead common to other well-known products for increasing the octane rating.

PROBLEMS

- Engine knocking
- Loss of power
- Detonation and post-ignition phenomena

ADVANTAGES

- Instantly increases the octane rating of gasoline, leading to a controlled, more uniform combustion.
- Increases power and effectiveness of the engine.
- Stops knocking due to pre-ignition and detonation (anti-detonating power).
- Inhibits the phenomenon of post-ignition caused by deposits in the combustion chamber.

DIRECTIONS FOR USE

Add one bottle of OCTANE BOOSTER directly to the fuel tank (dose for 40/50 liters). For a better result, add the additive to the tank not completely filled with gasoline, then fill the tank up to obtain the right mixing.

STORAGE

Store in original closed packaging, store indoors, away from moisture, from direct exposure to sunlight and weather. Avoid continuous and excessive temperature changes.
